

Tilt-and-Turn **wood frame window**

Our state-of-the-art wood windows meet and exceed Energy Star® requirements for Northern US region with U-value of .27 for double and .21 for triple pane.

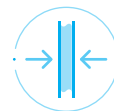

Wood frame

- Endless color possibilities to perfectly match your setting.
- Our state-of-the-art, two layer deep penetration painting technology, protects your wood window from fading, yellowing, cracking, wrinkling, or peeling over time.
- Each frame layer is made from 100% kiln cured solid wood, with maple used on the two outside layers and pine tree on the inside.

Extra security

An optional upgrade is a Triplex glass, 2mm thick glass panes glued together, working as a car windshield. It offers extra impact resistance and security. Damaged glass won't shatter, instead will crack, which keeps home temporarily secured until window replaced.

Thickness matters

All of our standard glass is no less than $\frac{1}{6}$ " thick, upgrade-able to $\frac{1}{4}$ " thickness for additional noise cancellation and durability.
